Two-Factor Authentication Enrollment – Cisco VPN Access

The following instructions must be completed outside of the AHS network.

There are two methods to gain access to the network remotely via two-factor authentication

- 1) Install the **Imprivata ID** app on your smartphone or tablet so that you can receive notifications to approve or deny authentication attempts that are utilizing your network username and password.
 - For iPhone/iPad devices search for an app named Imprivata ID and install from the App Store
 - For Android devices search for an app named Imprivata ID app from Google Play

By scanning the QR code you will be taken directly to the application in the appropriate app store

 Receive one-time verification codes via text message to a phone number that you have enrolled. This will occur each time you attempt to connect to the network remotely. This set of instructions begins on page 4 of this document.

For added security a temporary code is required for mobile device enrollment. New VPN users are provided a temporary code by their manager, which is issued by the Service Center during the remote access request. Current VPN users re-enrolling an existing or a newly purchased phone, please contact the Service Center for verification of employment to receive a temporary code for enrollment.

Below are the procedures to enroll your mobile device for each of the options listed above. You will only need to select one of the options.

Option 1 – You have installed the Imprivata ID application on your phone via your phone provider's application store

1) Open the Cisco AnyConnect software and select **Connect.**

 In the Group box click on the upsidedown triangle and select
 AHS_Employees_2FA from the list of options.

3) Enter your network Username and Password and select **OK**.

| 8) | Please confirm that the number you entered is correct by entering Y for yes or N for no. Select Continue once entering this. | Image: Second control of the primary VPN X Image: Second control of the primary VPN X |
| 9) | You will now receive a text message containing a verification code to the number you provided in the previous step. Please enter that code here and select Continue . | Cisco AnyConnect AHS Primary VPN Answer: |

10) The enrollment process is now complete. You should now be connected to the network via VPN.

This will be how you will need to connect utilizing Cisco AnyConnect VPN outside of AHS locations moving forward.

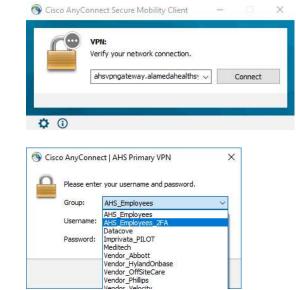

Please note that upon your next authentication attempt you will receive a notification to the phone number you provided. This notification will prompt you to Approve or Deny your connection request (see image below). If you are not actively attempting to connect and receive a notification, please **Deny** the attempt and contact the helpdesk at 510-437-4503 (xt44503) immediately so that your password can be changed.

Option 2 – You have chosen to receive one-time verification codes via text message when you connect

1) Open the Cisco AnyConnect software and select **Connect**.

 In the Group box click on the upsidedown triangle and select
 AHS_Employees_2FA from the list of options.

 Enter your network Username and Password and select OK.

4) Enter the **Temporary Code** issued for mobile device enrollment and press **Submit**.
